ROAD BARRIER 1 WE ARE THE FIRST

Road barriers are used to protect traffic from roadside obstacles or hazards, such as steep slopes enough to cause rollover crashes, fixed objects like bridge piers, and bodies of water, construction sites and diversions.

Road barriers can also be used with medians, to prevent vehicles from colliding with hazards within the median and head on collisions.

Al Bassam HD Road Barriers are scientifically designed with latest technology and are manufactured using tough molded High Density Polyethylene. With the biggest and latest machinery, we are the first company to introduce HDPE Road Barriers throughout UAE. With past experiences and taking into UAE weather conditions, these HD Road Barriers are designed with high stability to withstand harsh weather and climatic conditions of UAE with longer life span than low density. It is easy to carry, transport, stack, store compared to traditional concrete barrier. One person can easily move an empty barrier into position. The simple molded male-female pin system allows road barriers to be tightly interlocked for extra strength and can rotate 180 degree.

“ To make it easy to reach for our clients, Al Bassam has a huge fleet of 45 vehicles ready to serve you at your doorsteps.

APPLICATIONS

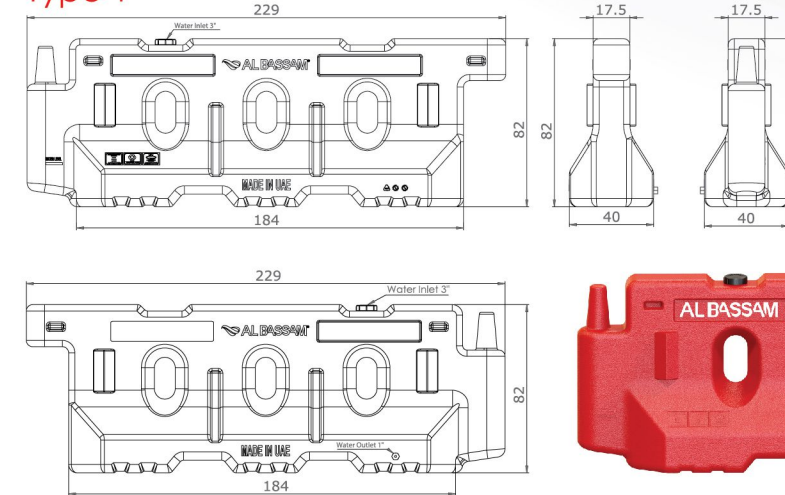

- CAR PARKING
- ROADS CLOSURE
- ROADS DIVERSION
- PEDESTRIAN CONTROL
